STRUCTURAL ENGINEERS

ENTERTAINMENT & VENUE

There is a delicate relationship between innovation and time-tested engineering methods, and no structures require this balance more than modern entertainment venues. These venues oftentimes multipurpose in function and have diverse sets of structural requirements. McNamara•Salvia possesses a wide range of experience with projects that span from theater style seating in cinemas to the design of professional sports stadiums.

McNamara•Salvia designed the Green Monster seats at iconic Fenway Park which consists of a series of cantilevers. Our design helped the Red Sox capitalize on converting an unused five foot wide sidewalk between the ballpark's right field wall and roadway. The first cantilever consisted of the caisson foundation supporting a vertical cantilever truss; the latter supporting a raker cantilever over the roadway. The result created revenue out of thin air and the most sought-after party seating in the stadium.
