## STRUCTURED PARKING

Parking structures have proven to be an essential part of urban architecture and development. As a result, many of our projects both urban and suburban alike, include a structured parking component.

We work with our clients to identify the most cost-effective solutions in order to meet their objectives. Whether that objective is lowest initial cost of construction or long term cost of ownership, we can help you understand the trade-off between systems while at the same time providing a design that is both highly functional and aesthetically integrated with its surroundings. We not only have expert structural engineering knowledge but also a broader understanding of the overall garage system. This knowledge and understanding enables us to help the team find the most innovative solutions for your project and help owners receive the most value for their investment.
